

Show all work for credit. Turn in all scratch work in a neat and orderly fashion.

1. The table gives the percent  $p$  of African voters who have supported Democratic candidates for president for the years 1960-1996.

Year	Democrat (%)
1960	68
1964	94
1968	85
1972	87
1976	85
1980	86
1984	89
1992	82
1996	84

a. Is the percent  $p$  a function of the year? Explain.

5pts Yes, for every input, there is only one output. (VLT passes)

b. Let  $p = f(x)$  denote that  $p$  is a function of the year. Find  $f(1992)$  and explain what it means.

5pts  $f(1992) = 82$   
 In 1992, 82% of African voters who have supported Democratic candidates for president

c. What is  $x$  if  $f(x) = 94$ ? What does this mean?

5pts  $f(1964) = 94$   
 In 1964, 94% of African American voters supported Democratic candidates for president.

d. What is the domain of the function described in the table?

4pts  $[1960, 1996]$  or  $1960 \leq x \leq 1996$  but every 4th year!  
 ok  $x \in \{1960, 1964, 1968, \dots, 1996\}$

e. Do a scatterplot in the window [1955, 2000] by [60, 100]. Which shape best fits the data (linear, quadratic, or cubic)?

4pts

f. Calculate the linear regression equation.

4pts

$$Y = 0.10625x - 125.6$$

g. What is the slope and what does the slope mean in the context of the problem?

5pts  $m = \frac{0.10625\%}{1}$  An increase of 0.10625% of African Americans supported Democratic presidents each year.

h. Does a linear function model the data in the table exactly? Explain.

4pts No, not exactly a line.

i. Use your equation in part f to predict the percent of African American voters who supported Democratic candidates for president in the year 1982.

4pts  $y = 0.10625(1982) - 125.6$   
 $y = 84.9875\%$

Prop value

2. A business property can be depreciated for tax purposes by using the formula  $y + 3000x = 300,000$ , where  $y$  is the value of the property  $x$  years after it was purchased.

a. Find the  $y$ -intercept of the graph of this function. Interpret this value.  
 years since purchase

4pts  $y + 3000(0) = 300,000$   
 $y = 300,000$   
 $(0, 300000) \Rightarrow$  Initial purchase value is \$300,000.

b. Find the  $x$ -intercept of the graph of this function. Interpret this value.

4pts  $0 + 3000x = 300000 \Rightarrow x = 100$  After 100 years, value of property is zero.

3. The mean time in prison  $y$  for a crime can be found as a function of the mean sentence length  $x$ , using  $y = 0.554x - 2.886$ , where  $x$  and  $y$  are in months. If a convicted criminal served 17 months, how long was the criminal's sentence length ordered by the judge? Solve by a method of your choice.

8pts mean time in prison (months)      mean sentence length (months)  
 $17 = 0.554x - 2.886$   
 $19.886 = 0.554x$   
 $35.9 \text{ months } x$

4. Use the graph to solve an equation where  $Y1 > Y2$ . Each tick mark represents one unit.

5. Match the slopes with the appropriate lines shown below. Place your answer in the boxes provided.

$$m = \frac{1}{5}$$

$$m = -3$$

$$m = 2$$

$$m = 0$$

$$m = \phi$$

4 each

-3

$\phi$

2

$$6. \begin{cases} 3x - 4y = 21 \\ 2x + 5y = -9 \end{cases}$$

a. Solve by the substitution method.

$$\begin{cases} 3x - 4y = 21 \Rightarrow x = \frac{21 + 4y}{3} \\ 2x + 5y = -9 \end{cases}$$

$$2\left(\frac{21 + 4y}{3}\right) + 5y = -9$$

$$x = \frac{21 + 4(-3)}{3}$$

$$x = \frac{21 - 12}{3}$$

$$x = \frac{9}{3}$$

$$x = 3$$

6 pts

$$\frac{42}{3} + \frac{8}{3}y + 5y = -9$$

$$\frac{42}{3} + \frac{8}{3}y + \frac{15}{3}y = -9$$

$$\frac{42}{3} + \frac{23}{3}y = -9$$

$$\frac{23}{3}y = -23$$

$$y = -3$$

b. Solve by the elimination method.

$$\begin{cases} (3x - 4y = 21) \cdot (2) \\ (2x + 5y = -9) \cdot (-3) \end{cases}$$

$$6x - 8y = 42$$

$$-6x - 15y = 27$$

$$-23y = 69$$

$$y = -3$$

$$3x - 4(-3) = 21$$

$$3x + 12 = 21$$

$$3x = 9$$

$$x = 3$$

6 pts

c. Solve by graphing.

$$y_1 = (-3x + 21) / -4$$

$$y_2 = (-2x - 9) / 5$$

6 pts

$$\begin{cases} x = 3 \\ y = -3 \end{cases}$$
