- 1 The owner of a gas station has \$4400 to spend on unleaded gas this month. Regular unleaded costs him \$0.60 per gallon, and premium unleaded costs \$0.80 per gallon. Write an equation that relates the amount of regular unleaded gasoline, x , the owner can buy and the amount of premium unleaded, y . (Your equation will have the form $ax + by = c$.)
- 2 Annelise is on vacation at a seaside resort. She can rent a bicycle from her hotel for \$2 an hour, plus a \$4 insurance fee. (A fraction of an hour is charged as the corresponding fraction of \$2.) The equation for the cost of the rental, C , in terms of the number of hours, t , is

$$C = 4 + 2t$$

How much will it cost Annelise to rent a bicycle for 3 hours? Check your answer using the graph.
